

Childs J

THE JOHNS HOPKINS HOSPITAL
BALTIMORE, MARYLAND 21205

28 Oct.

Dear Josh,

Thanks for yours of 2 Oct. I can't give an answer because I've just come back from a vacation which took up most of Oct. But I see that Haldane referred to Garrod apropos consanguinity in *Alkaptonuria* in 1933 in his book "Nature & Nurture". Haldane mentioned him in his 1941 "New Paths in Genetics", referring to the inborn errors. I found no mention of G. in Fisher's "Genetical Theory of Natural Selection", 1929. But there are 6 references to Galton. E.B. Ford's, "Genetics for Medical Students", 1942 gave no reference. Nor did F.R.K. Greve in his text, date 1946. These are just books I happen to have. I would like to answer your question though because Charles Sivier and I have been asked by Oxford Press to do an annotated edition of Garrod's 1931 book, "Inborn Factors in Disease", and it would be a natural thing to look for references to his work among early geneticists & others.

I'm much obliged for the referee to Bodansky which I
had missed. The reference to Toten's course is
astonishing. The idea must have informed his
approach to neurosurgery.

So I'll have some information in a month
or so. The enclosed shows how timely are some
other of Janos' ideas.

With best regards,

J. Batory
